

3.1 Shows

How to create a new show:

1. Click Shows -> Add New
2. Fill in a title, description and genre(s)
3. The **genres** will become archives that will group the shows together, with the logic based on the category instead of the time as it happens in the schedule

4. **Featured image:** is the picture used in the schedule and as main image in the show page. **Must be: 2000 x 875 or at least 1600×700. This image will appear everywhere as show's main image.**
5. **Short show description** is used in the schedule. If missing, an excerpt will be used. It allows basic html tags. No js or css are allowed here.
6. Remember to **SAVE /PUBLISH**

Note: The right column of each shows is **automatically generated** once you **add a show to a schedule**, with a list of all the times when a show goes on air, and a link to each specific schedule day when it appears.

For each show you can set a specific category of posts, podcasts and charts.

The show's timetable is automatically generated from the Schedule.

Rules:

- Any show can be added to unlimited schedules and unlimited times
 - When editing a show, it will change in every schedule where it appears
 - **A show doesn't need to be duplicated** in order to appear in multiple schedules. If for example your timetable is a week and a show is every morning, you don't need to create 7 copies of the show. The item is re-usable across unlimited schedule pages.
