

# ONAIR2 HTML INSTRUCTIONS

---

Welcome to the instruction manual for the ONAIR2 HTML template. This document will help you through the setup of your website.

## Structure of the Project:

### IMPORTANT:

If you want to make use of the Contact form email submission, you must have a PHP server with the mail function active.

### Files of the HTML version:

1. archive-chart.html
2. archive-events.html
3. archive-members.html
4. archive-podcast.html
5. archive.html
6. index.html
7. page-contacts.html
8. page-popup.html
9. page-schedule.html
10. single-chart.html
11. single-event.html
12. single-member.html
13. single-podcast.html
14. single-post.html
15. single-show.html
16. email\_sender.php

### How to edit the files?

For Windows, you can use Notepad++

For MAC, Sublime or Brackets are good editors (<http://brackets.io/>)

### Changing colors

This project is realized in CSS on the base of the materializecss framework (<http://materializecss.com>). **The main SASS file is /sass/qt-main.scss.**

The best way to customize the colors is to edit the files:

- ./sass/components/color
- ./\_custom\_colors.scss

Then compile the file qt-main.scss and put the output in ./css/qt-main.css

### Changing font families

Edit the file `./css/qt-typography` to change font families associated with titles and contents.

## Javascript libraries

---

This template uses several javascript libraries for effects and interactions. They are all loaded at the end of the html, before the closing of the body tag. The default version of all the libraries is included, and the custom code is contained in the file `./js/qt-main.js`

### Framework:

This template is based on the materializecss framework (<http://materializecss.com>).

### Other libraries contained in the “components” subfolder:

**Carousels:** slick.js

**Audio Player:** soundmanager2.js

**ClassyCountdown:** <https://vox.space>

## Contact form

---

To customize the details of the contact form (subject and destination of the message) edit the file `email_sender.php` with a text editor. The file contains in the comments the instructions to update it.

## Copyright

---

### Libraries:

**Material framework:** materializecss.js
