

## 2.0 Creating contents

### Custom post types:

This theme features **11 Custom Post types**. The post types are added by specific plugins, as per WordPress development rules. This means that **you won't see any of these post types unless you install the required plugins** as explained in the plugins installation section.

Post types added by Theme Core plugin:

The Theme Core plugin (ttg-core) is responsible for generating all the extra functions of the theme, such as customizer and extra fields or post types. **If you don't see the custom types, visit your plugins folder and activate it.**

- **Staff members:** for music bands or members of a company or crew.
- **Song charts:** allows to add music charts with multiple tracks. Each track can have a Soundcloud, MP3 or Youtube preview. Can contain unlimited tracks.
- **Podcast:** allows to add Podcasts with MP3, Mixcloud, Soundcloud or Youtube player.
- **Events:** allows to add Events with a date, a map and a countdown. Events can be added to an events map via the QT Places Plugin (included with the theme).
- **Radio shows:** create pages of shows which can be used to create a schedule, and display the actual show within the OnAir widget. Once shows are created, can be added to the Schedule post.
- **Radio channels:** allows to add unlimited radio channels. To use the theme's built-in player, you need to have a valid stream URL. Check the dedicated manual section for more infos.
- **Sponsors:** creates a scrolling footer of sponsors, which you can activate for single pages

**DEVELOPERS INFO:** All the custom types, taxonomies and shortcodes declarations are in the theme's subfolder **"wp-content/onair2/ttgcore-setup"**.

## Places:

- Added by **QT Places plugin**, allows to create Places and to create maps with locations and filters.  
Please note this is a premium plugin bundled with the theme. You need a personal license to receive support.  
Plugin page: <https://codecanyon.net/item/qt-places-interactive-responsive-google-maps-wordpress-plugin/15674168>
- [Download QT Places manual](#)

## Videos

- created by **QT Videolove Plugin**. Allows to add videos and display a gallery of filterable videos using the **[videolove]** shortcode. Please visit **Settings->Videolove** for usage instructions.

## Banners

- created by **QT Banners plugin**. Allows you to create banners widget and count the clicks.
-
